

COMBINED DATA AVAILABLE ON EMPLOYER AND NONEMPLOYER WORKERS

For the first time The U.S. Census Bureau has [released a report](#) that combines two sources of data to get the number of establishments considered employer and nonemployer..

The U.S. Census Bureau's [County Business Patterns \(CBP\)](#) is a source that only provides data on businesses that have employees on their payroll, while [Nonemployer Statistics \(NES\)](#) reports on non-employees.

In 2016, only 23.8 percent of the 32,570,855 establishments in the United States had paid employees. That means the remaining 76.2 percent of establishments were nonemployers or establishments that don't have any paid employees. These establishments average less than 4 percent of all sales and receipts nationally.

Who Are Nonemployers and Employers?

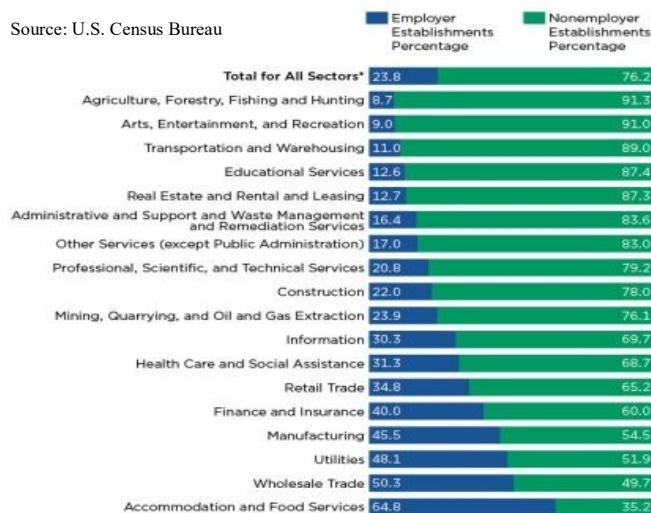

Businesses that have no paid employees and are subject to federal income tax are nonemployers, and the people that work in their establishments are self-employed individuals. Employers that direct workers are obligated to pay a salary or wages in compensation.

WHAT THE DATA TELL US

By looking deeper into both sets of data on the chart below, you'll see that in some sectors of the economy, such as [Arts, Entertainment, and Recreation](#), nonemployer establishments account for 91.0 percent of total establishments. In other sectors, such as [Wholesale Trade](#), only about half of the establishments are nonemployers. [Accommodation and Food Services](#) is the only other sector with more employer establishments (64.8 percent) than nonemployer establishments (35.2 percent).

The three states with the largest percentage of nonemployer establishments are Texas (79.5 percent), Georgia (79.4 percent) and Florida (79.0 percent). North Dakota is the only state where more than 30 percent of the establishments have paid employees.
